

# Mapping Your Network

Network Analysis of A Collaboration

THE GALLATIC COLLABORATION PROJECT FOR HEALTH ACCESS

Start with the first program..

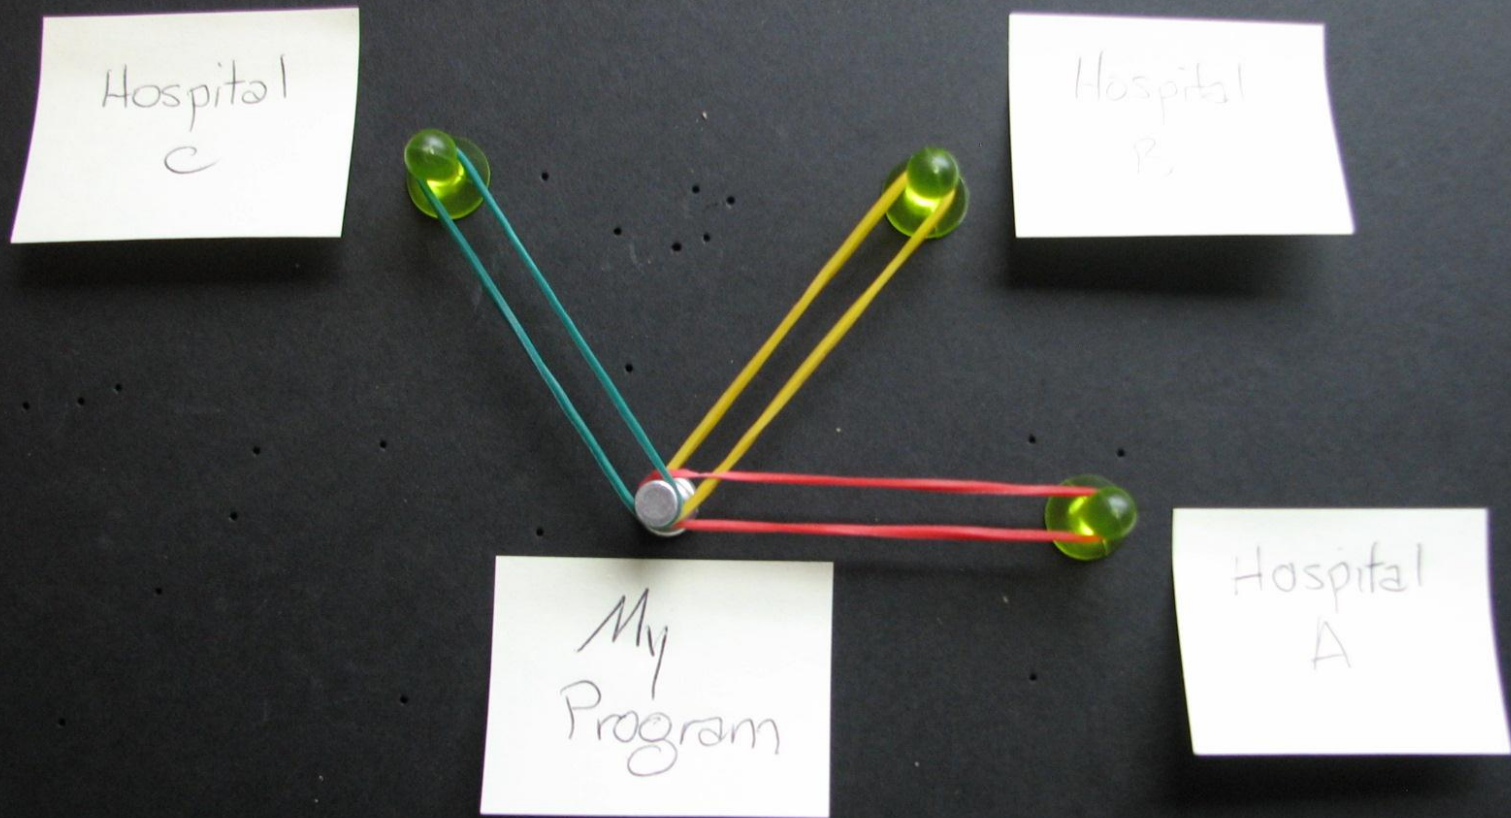

Use a push pin to represent the types of stakeholder (e.g., academic, business, etc.). Show these on a **color key** located on the upper right hand side of your board.

Green = Government

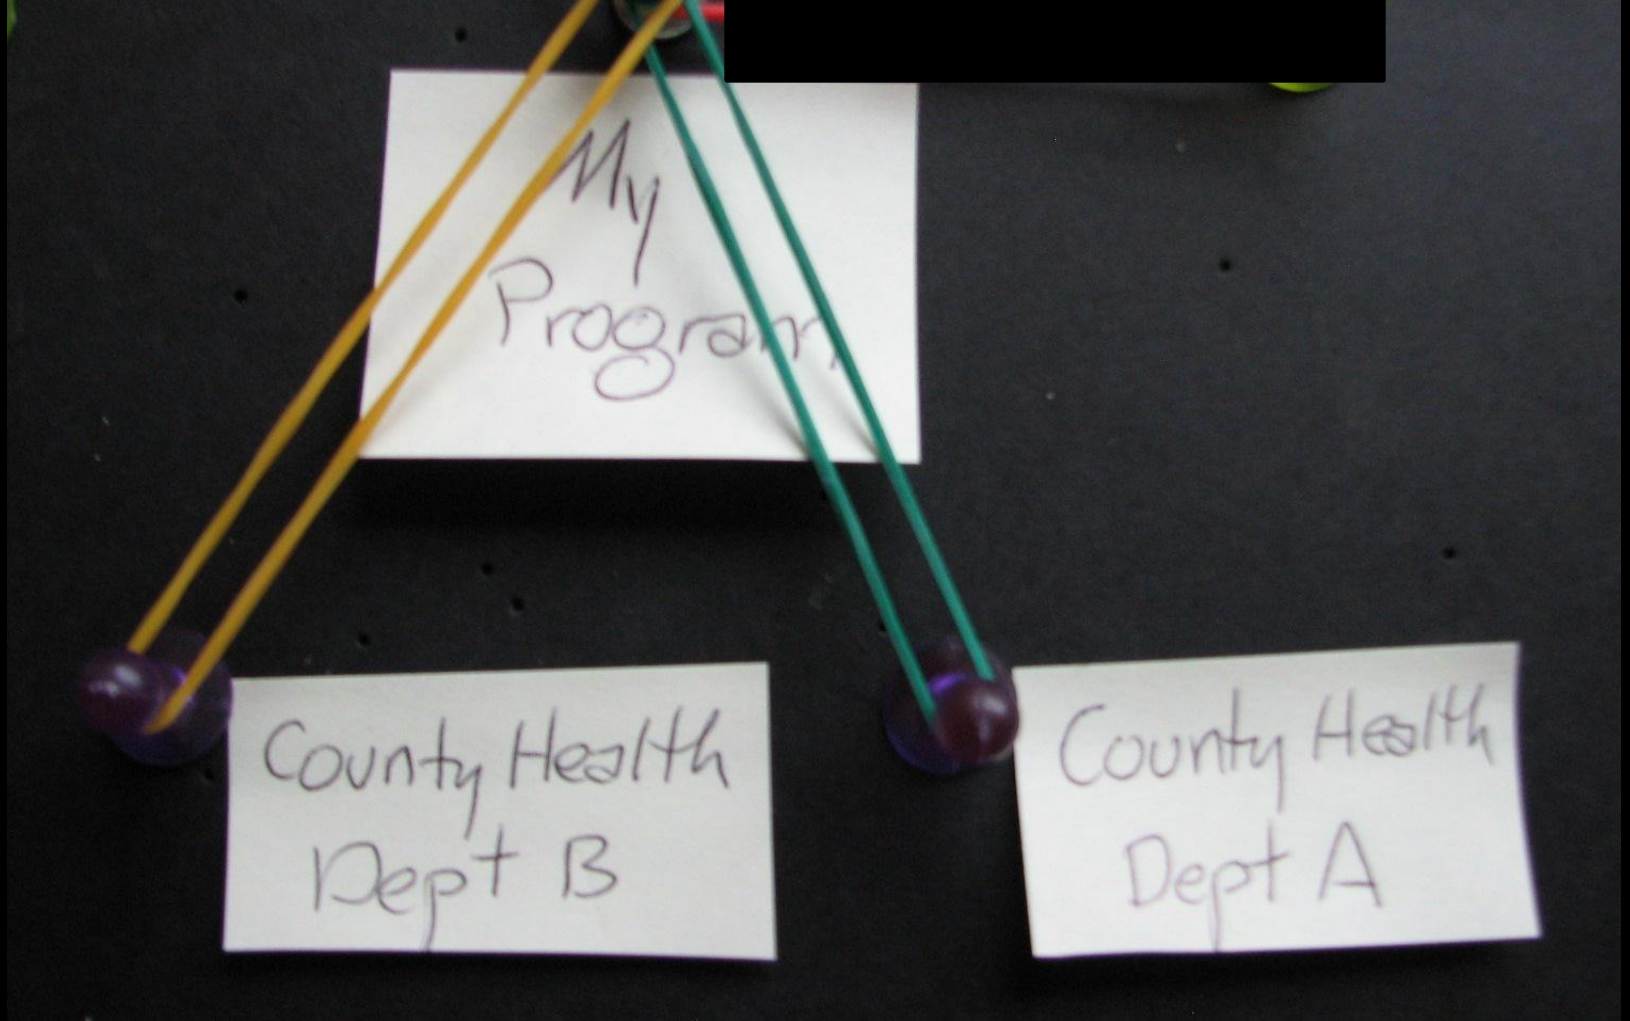

Blue = Business

Purple = Not-for-profit

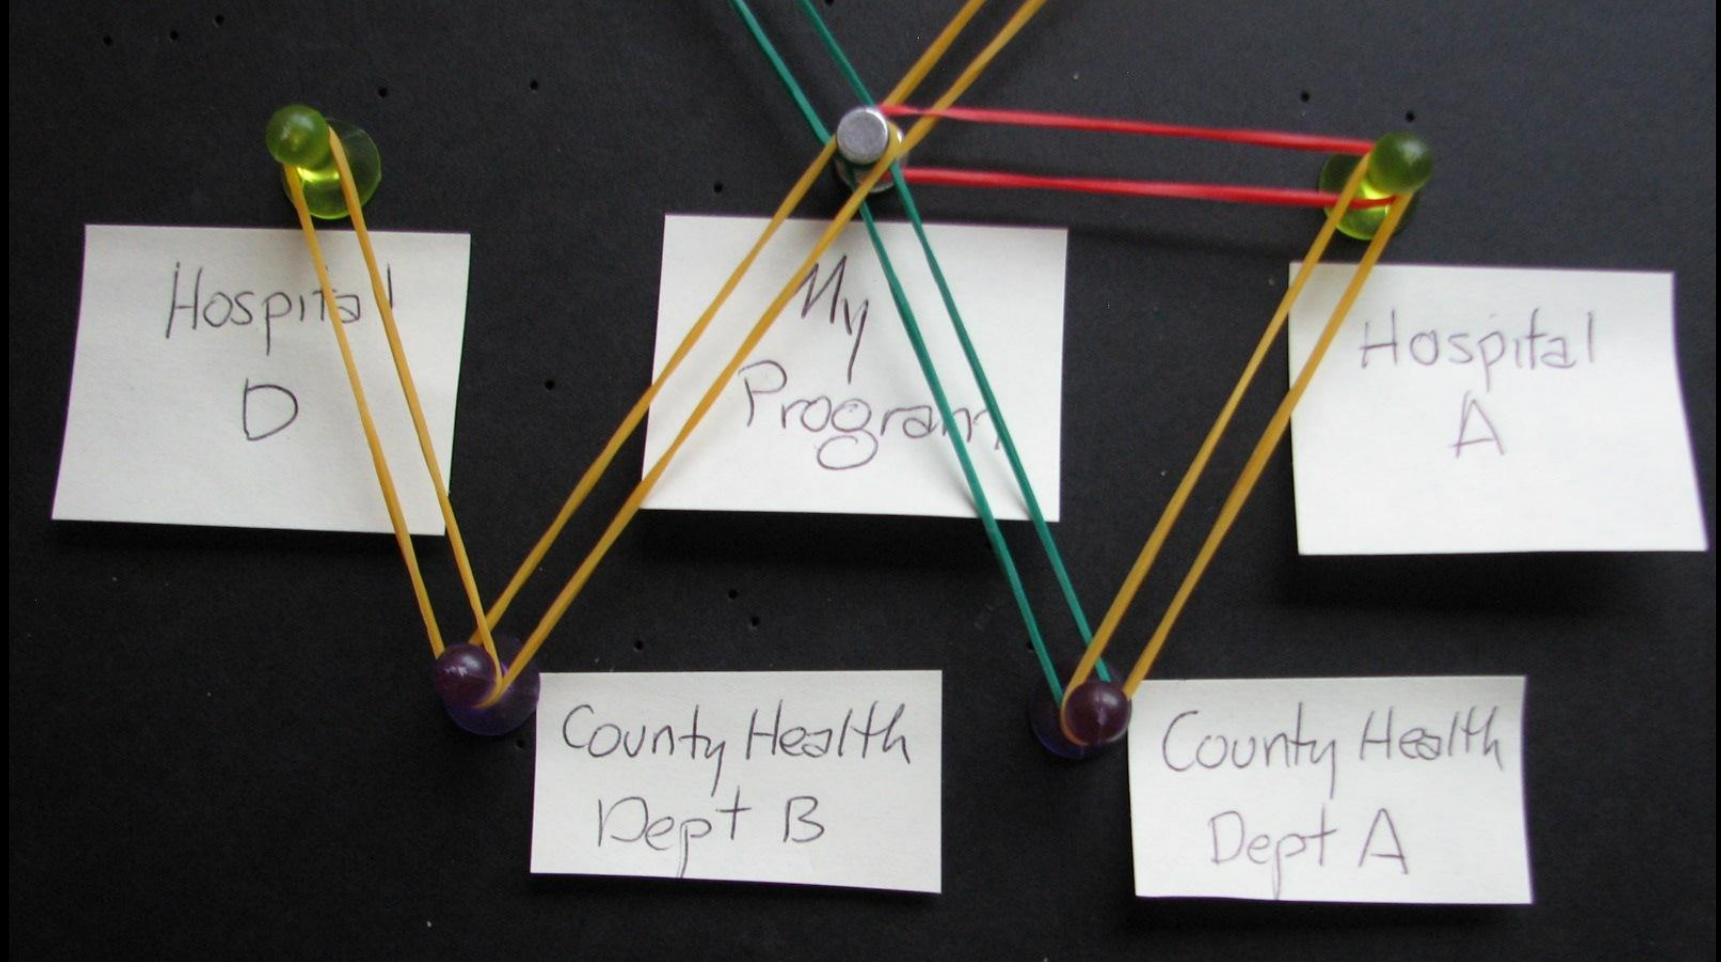

Each stakeholders relates to each other with a different **type of tie**. Ties are shown with different colored rubber bands. Use the rubber bands to represent ties in your network. **Green**=Contractual; **Yellow**=Interlocal Agreement; **Red** =Information exchange; **Blue** = CoLocation

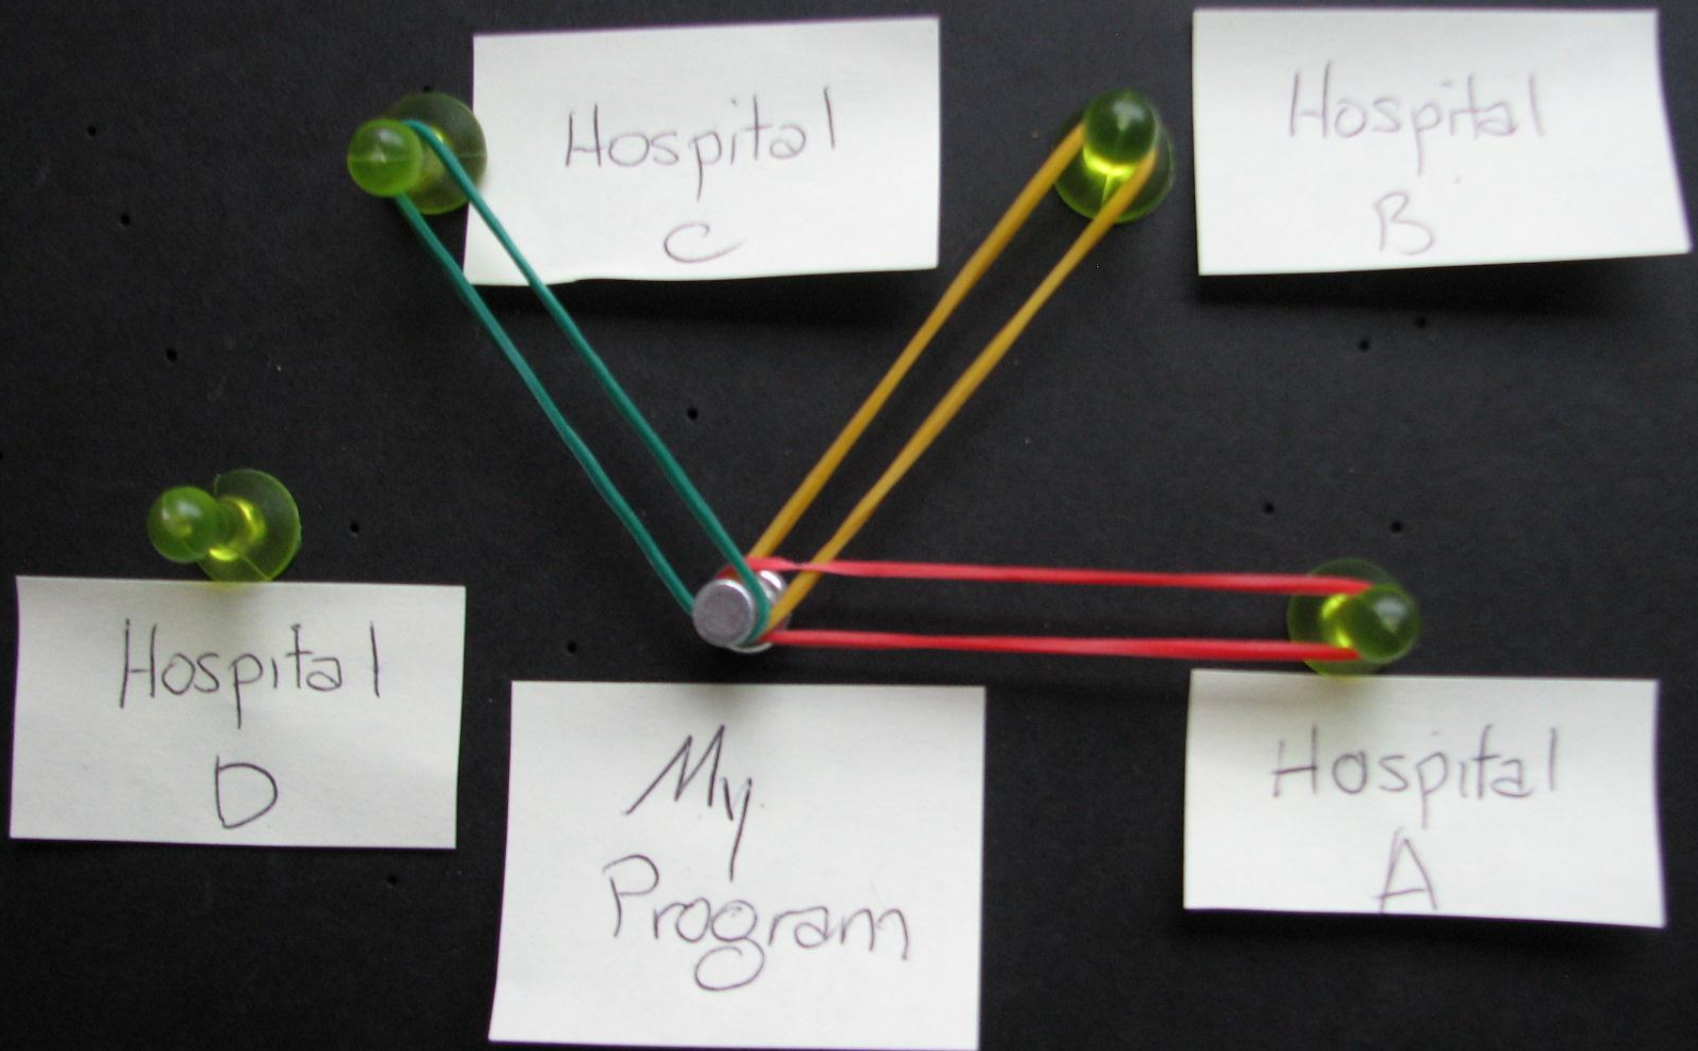

Examples of how stakeholders might be connected to one another. (Directly)

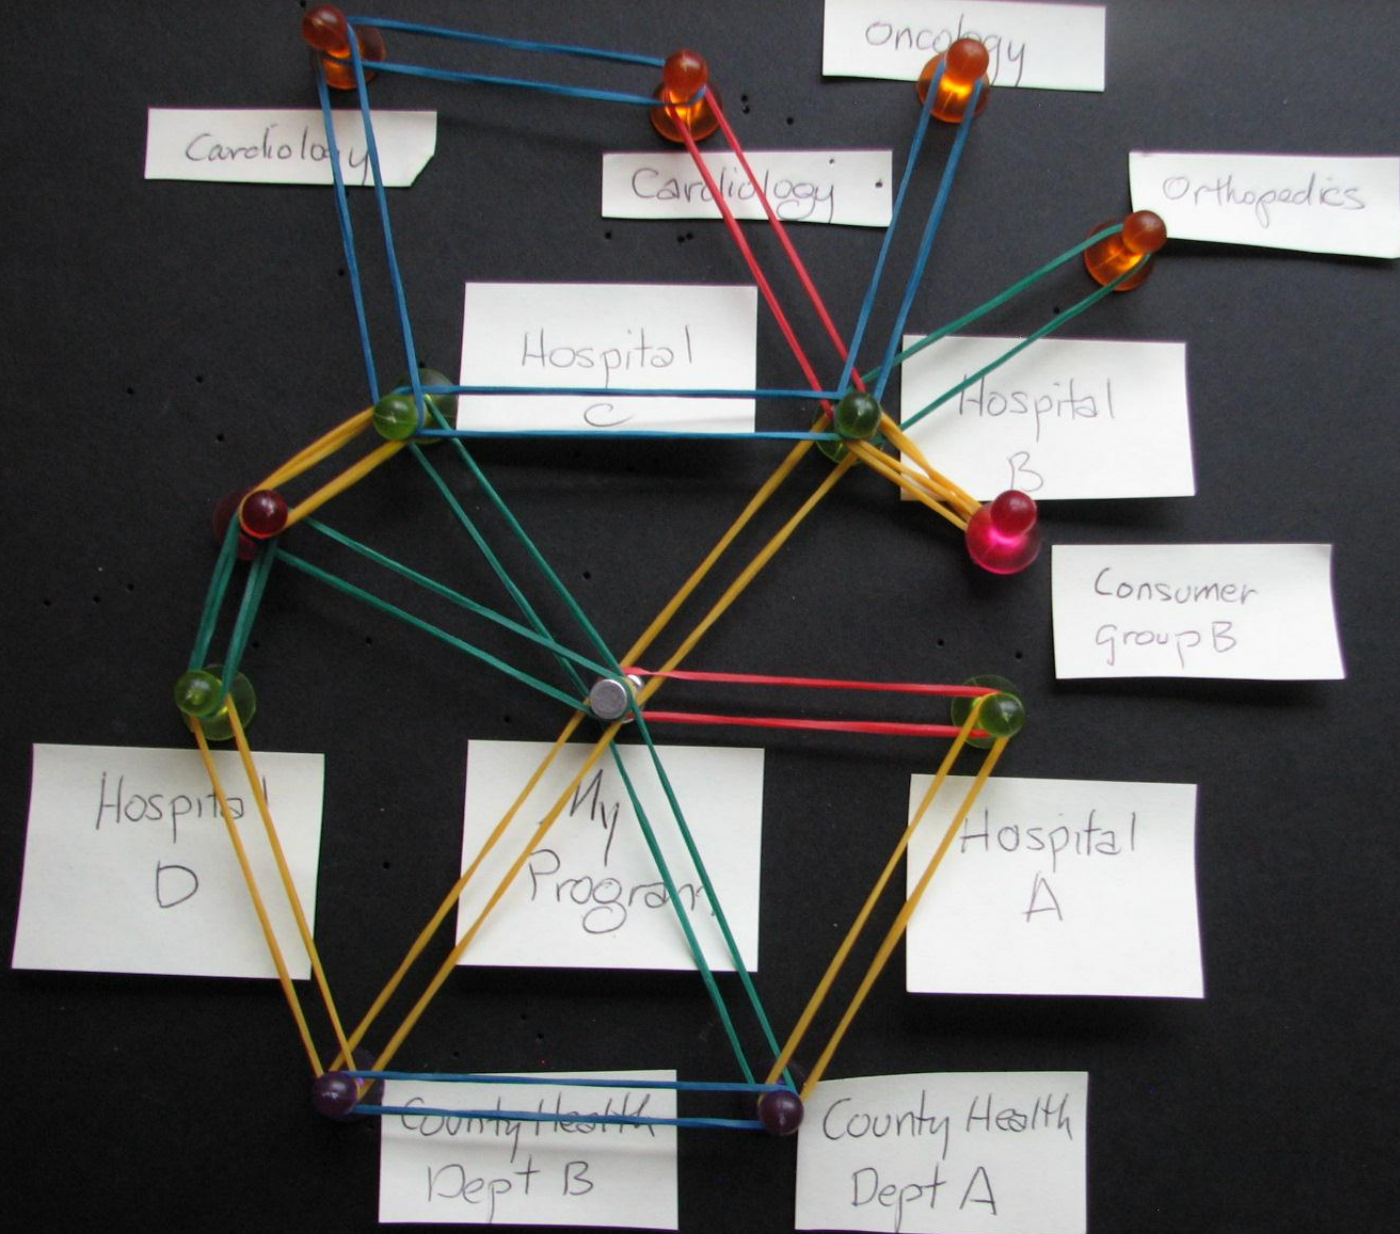

Examples of how stakeholders might be connected to one another. (Indirectly)

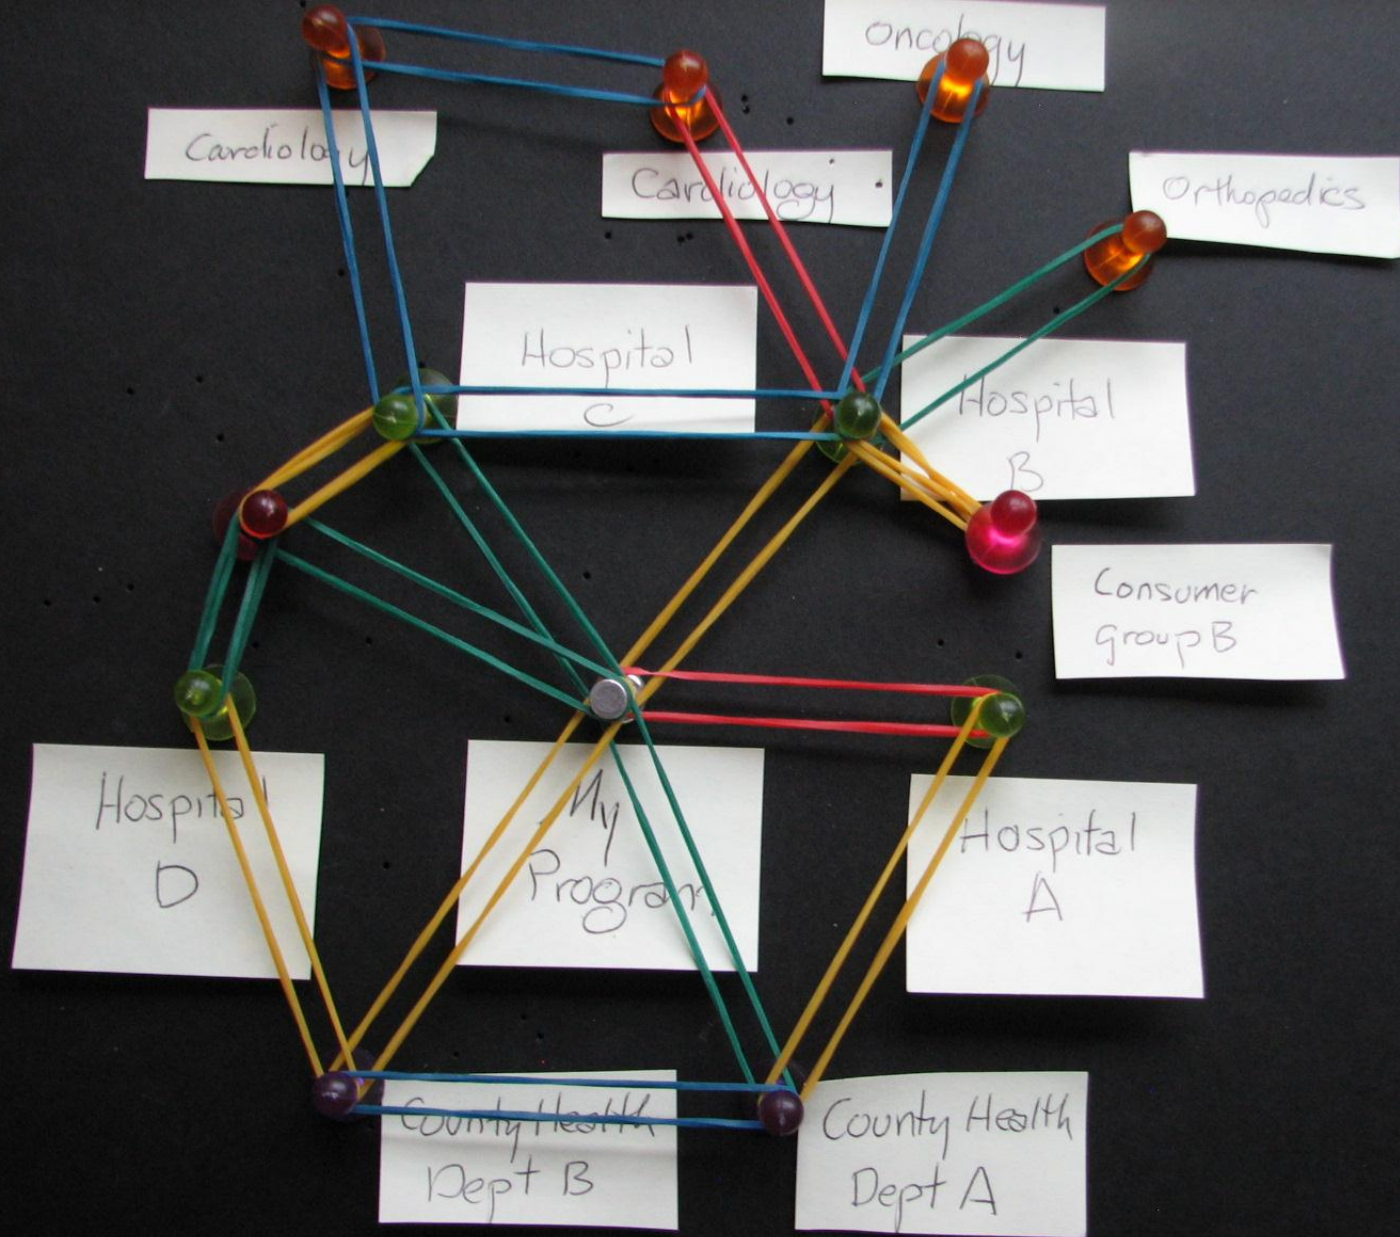

You will also want to think about relationships that you would like to establish. For example, Hospital D is in my region is not involved with my program. (Thus there is no rubber band connecting it to my network.)

My current and desired stakeholder ties define the network that I believe will help me to achieve desired outcomes .

These are the **CONNECTIONS**...the linking infrastructure of a collaboration.

...now you try it.
